

ENGINEERING FOR EVERYONE

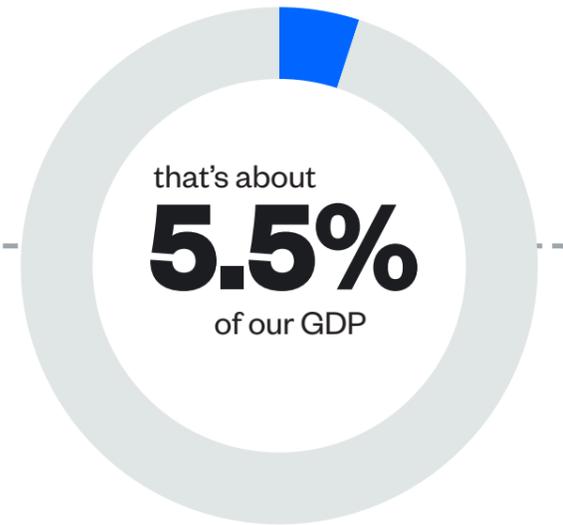

We've always known engineering is a big deal for New Zealand but now we've got the data to prove it. Here's how much engineering is worth to our economy.

Engineering generates about

\$18 billion

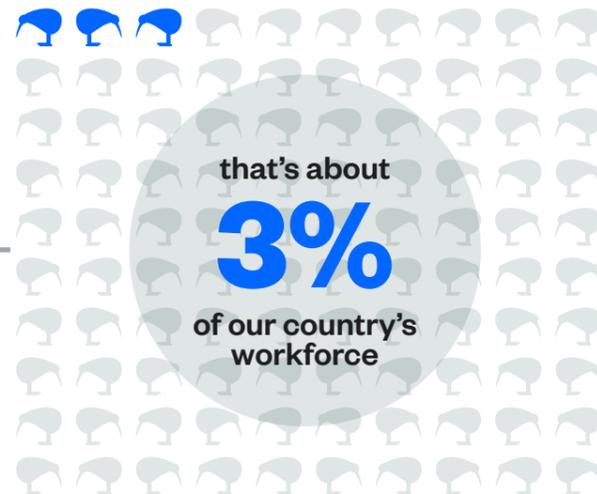

per year for New Zealand's economy

BUT... we need almost

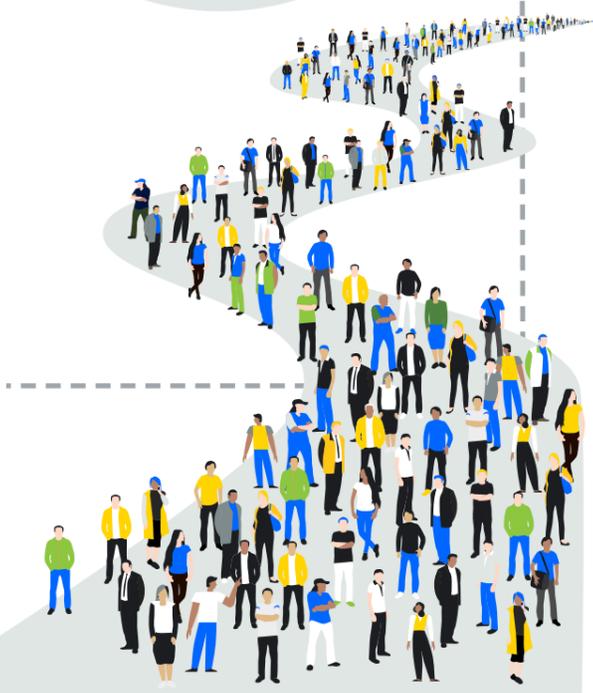

new engineers each year to support our economy

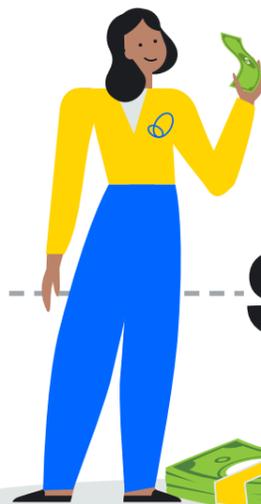

We currently have about

77,000

engineers in New Zealand

Plus, we need to keep the engineers we've got (and replace those who retire)

On average, each engineer contributes

\$228K

to our GDP

Engineers make New Zealand a better place. Because engineering is for everyone, and everyone needs engineering.
